

CARE AND MAINTENANCE OF YOUR ADAPTA CYLINDERS

Masterkeyed door cylinders have on average, between 24 and 48 moving components on the key side. This means it's very important to ensure the cylinder is maintained on a regular basis to ensure reliability in the future.

The best part is, it's so easy and takes just a few seconds!

We recommend a Silicone or Teflon based lubricant sprayed into the keyway with one short burst into keyway at the following intervals dependent on your environment or usage.

- ✚ Coastal/Corrosive environments apply **MONTHLY**.
- ✚ 75-100 key operations a day apply **MONTHLY**.
- ✚ 50-75 operations a day, apply **QUARTERLY**.
- ✚ Less than 50 operations a day, apply every **6 MONTHS**.
- ✚ It really is that easy!

However, under no circumstances use WD40*, Grease or Oil.

Appropriate lubricants and cleaners are available via the Architectural Ironmonger that supplied the suite.

If in any doubt, we're always here to help. Please email us at sales@masterkeysystems.co.uk or customerservice@masterkeysystems.co.uk and quote your Master Key reference number for more information.
